

MOC-MSC

Cegelec Défense has an Integrated Logistics Support (ILS) unit, dedicated to Maintaining systems in Operating Condition (MOC) and ensuring system security (MCS). The unit mission, organisation and resources are optimised to meet the specific operational and secrecy-protection requirements of our customers.

Integrated logistic support – Maintenance and security follow-on support

Cegelec Défense provides services realised indifferently upstream (sizing, preparing the validation of the support) or downstream (maintaining the system in operating condition) system exploitation, according to a modular offer declined around management, logistic support engineering, support work and assistance.

In the frame of our MOC activities, we perform preventive and curative maintenance operations. Cegelec Défense Infrastructures & Réseaux also ensures compliance with all procedures, notably as regards the triggering any intervention and updating documentation, if any changes or amendments must be made.

Maintaining systems in Security Conditions (MSC) aims to maintain the system initial security condition throughout its lifespan. In the event that a new vulnerability is identified as regards one of the components in the system concerned, this service makes it possible to assess the risk level and then, depending on the risk level and in consultation with the Administration, to implement an organisational or technical workaround or a corrective measure within a certain time-frame.

Download the [Integrated logistic support – Maintenance and security follow-on support sheet](#) for more details.
