

OPERATIONS MANAGEMENT & CRISIS MANAGEMENT

Cegelec Défense proposes innovative infrastructures for implementing autonomous deployable logistics resources as mobile operational command posts, emergency operation centres or crisis management centres.

Infrastructures used in all circumstances

Our infrastructures are used in the frame of Armed Forces operations, catastrophes or natural disasters, public unrest or acts of terror or health hazards.

Our objective is to enable civil or military command centres to rapidly and autonomously deploy decision-making, communication and planning centres, whatever the conditions, in full autonomy. Large-scale operations in emergency situations can thus be organised and managed:

- ✓ Planning,
- ✓ Operations command and control,
- ✓ Information and communication systems,
- ✓ Logistics.

Pay particular attention to human without neglecting the system

<https://youtu.be/t4hf8562xyc>

Give an important place to the man without neglecting the system

The solutions developed by Cegelec Défense pay attention to human requirements during system conception and integration phases. They propose physical integrations within expandable shelters or within modular containers, ensuring operations conduct are managed in the best conditions, in terms of responsiveness, performance and quality

Thanks to the modular nature of the shelters, a fully-integrated command post can be laid out by adding different modules comprising the specific functions devoted to planning, operations management, communications, IT resources, logistics, intelligence and the management of back-up resources and support.

These « all-in-one » systems are designed to favour agility, improve Command & Control efficiency and reduce energy use.
